Poster Presentation Tips

Ask a Librarian
General Aim and Format

- A poster is a graphically based approach to presenting research. In presenting your research with a poster, you should aim to use the poster as a means for generating active discussion of the research.

- Limit the text to about one-fourth of the poster space, and use “visuals” (graphs, photographs, schematics, maps, etc.) to tell your story.
Conventional layouts for a poster. Long panel at top-center is the title/author banner.

Individual panels can be connected by numbers and arrows. Also, note the use of space between the panels to achieve visual appeal.
Visuals

- Present numerical data in the form of graphs, rather than tables (graphs make trends in the data much more evident). If data must be presented in table form - KEEP IT SIMPLE.

- Visuals should be simple and bold. Leave out or remove any unnecessary details.

- Make sure that any visual can “stand alone” (i.e., graph axes are properly labelled, symbols are explained, etc.).

- Use color to enhance comprehension, not to decorate the poster. Neatly coloring black-line illustrations with colored pencils is acceptable.

Make sure that the text and the visuals are integrated. Figures should be numbered consecutively according to the order which they are first mentioned in the text. Each visual should have a **brief** title (Ex: Figure 1 - Location of study area).
Lettering and Color

- Word-process all text (including captions). Print on plain white paper with a laser-or-inkjet printer.
- Text should be readable from five feet away. Use a minimum font size of 18 point.
- Lettering for the title should be large (at least 70-point font). Use all capital letters for the title.
- Color is encouraged, but limit the number of colors to create an overall theme for the poster.
- Use a light colored background with black or dark-colored text printed.
- Avoid dark backgrounds with white letters because it uses a lot of ink.
Design and Layout Specifications

- The entire poster can be mounted on a 40” x 60” foam-core board. The poster does not necessarily have to fill the entire working area.
- The board must be oriented in the “landscape” position (long dimension is horizontal).
- A banner displaying your poster title and name should be positioned at top-center of the board.
- Make it obvious to the viewer how to progressively view the poster. The poster generally should read from left to right, and top to bottom. Numbering the individual panels, or connecting them with arrows is a standard “guidance system”.
- Leave some open space in the design. An open layout is less tiring to the eye and mind.
Keep the text brief. Blocks of text should not exceed three paragraphs (viewers won’t bother to read more than that). Use text to:

- a) introduce the topic;
- b) explain visuals and direct viewers attention to significant data trends and relationships portrayed in the visuals, and
- c) state and explain the interpretations that follow from the data. In many cases, conclusions can be summarized in a bullet-point list.

Depending upon the stage or nature of your project, the text could also include sections on future research plans or questions for discussion with viewers.

Cite and reference any sources of information other than your own, just as you would do with a research paper. The “References” page is placed at the end of the poster.
Miscellaneous Suggestions

- **SIMPPLICITY IS THE KEY.** Keep to the point, and don’t try to cover too many things. Present only enough data to support your conclusions. On the other hand, make sure that you present sufficient data to support your conclusions.

- When you begin to make your poster, first create a list of the visuals that you would use if you were describing your project with *only the visuals*. Write the text *after* you have created the list of visuals.

- Mat the components of the poster on separate pieces of colored poster board. The offsets the text and illustrations from the white mounting board. Also, you can easily attach each component to the mounting board with push-pins or thumb-tacks.

- Before the poster session, rehearse a brief summary of your project. Many viewers will be in a hurry and will want a quick “guided tour” of your poster. Don’t be afraid to point out uncertainties in your work; this is where you may get useful feedback.
